

TYPE YOUR MESSAGE IN CUBE TYPE!

SEND

**A website where people can type out there message using the typeface I created for them. They have no choice have choosing emojis, images or sending any voice message. Everything will be just text and the message to be made is limited, so get organized before sending out the message, how can you send the least sentences to finish your message? This is to question the web users about the relationship between themselves and the expansion of the social media. We are using them with so much convenient and we created a lot of spam messages, overwhelmed with information with them. We have to be more precise about what we are really conveying and receiving.**
